DETAILED ACTION

Allowable Subject Matter

1. Claims 1-51 are allowable over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

As per independent claims 1,16,18,20,24,39,43, and 48, the claim limitations pertaining to ordered grammar related queries included within a statistical parser for use in a natural language model, wherein the statistical parser follows decision trees with maximum entropy based decisions is not explicitly taught by the prior art of record.

As examples of the prior art of record, Brown et al (5719997) uses grammar in performing speech recognition based on HMM's (col. 4 lines 15-42). Wilson et al (6292779) teaches directed to a system and method for modeless large vocabulary speech recognition. The speech recognition of Wilson pertains to arranging acoustic model states to form acoustic models, each model composed of a sequence of segment models and each segment model composed of a sequence of the acoustic model states (col. 1 lines 65-67; abstract). However, neither reference teaches examining each possible substring using an inventory of grammar relate queries corresponding to a context free grammar, wherein the queries are ordered during training of an natural language system in order to from a decision tree, and wherein the ordering of the queries is a statistical ordering based on a minimization of entropy that predicts data to train the NLU.

Art Unit: 2655

Furthermore, it would not have been obvious to one of ordinary skill in the art of natural language translation to modify the teachings of the prior art of record to obtain the recited claim limitations of the independent claims as noted above.
